

Fan Installations

Exhaust Fans

To be comfortable and work efficiently, people need a constant supply of healthy fresh air.

From compact exhaust fans for removing cooking odours from kitchens to heavy duty industrial models that expel fumes and stale air from work environments, there is no reason why anyone shouldn't enjoy healthy clean air at home or work. Brent McIntosh Electrical can show you how today's whisper quiet models can make a huge difference to your home or work environment.

Mounting Options

Ceiling

Fit discreetly into cavity type ceilings to efficiently exhaust air. Stylish low profile fly proof grills can be easily removed for cleaning. We can also offer you decorative metal and timber models from the many brands we carry including Airflow, Mistral and O.ERRE to compliment contemporary decor while the Sunshine range of combination units provides total bathroom luxury.

CE250

Window

Easily installed and can be auto switched or pull cord operated, they expel air directly outside while automatic shutters keep out dust and insects

7105A

Wall

Brent McIntosh Electrical can offer installation on a wide range of wall mounted fans, from domestic fans with small diameters, right through to heavy-duty industrial models. Double brick, brick veneer, timber and pre-cast concrete are just some of the wall constructions suitable for wall mounted products

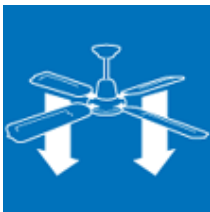

Ceiling Fans

Ideal for living areas and bedrooms the blades gently circulate to keep your family comfortably cool, while fan motors are whisper quiet these days, to ensure a peaceful night's sleep

In winter simply flicking the switch located just above the blades reverses the fan direction so the warm air that rises towards the ceiling is directed back down to where it's needed most'

As warm air is better circulated around the room, you'll find that you can usually turn your heating to a lower setting to help reduce your heating bills. Reversible fans are so economical, that they use less power than a light globe.

Air is forced back in
To the room in winter

Air is gently swirled down in summer
